SAFETY INSTRUCTIONS

Read Instructions – All the safety and operating instruc-tions should be read before the appliance is operated.

Retain Instructions - The safety and operating instructions should be retained for future reference. Heed Warnings – All warnings on the appliance and in the operating instructions should be adhered to.

Follow Instructions - All operating and use instructions should be followed.

4,

Water and Moisture – The appliance should not be used near water – for example, near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement, or near a swimming pool, and the like.

Carts and Stands - The appliance should be used only with a cart or stand that is recommended by the manufacturer.

combination to overturn. sive force, and uneven combination should be An appliance and cart the appliance and cart Ouick stops, excessurfaces may cause moved with care. ě,

ing electrode. See Figure A.

17

Wall or Ceiling Mounting - The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.

location of position does not interfere with its proper van-tillation. For example, the appliance should not be si-tuated on a bed, sofa, rug, of similar surface that may block the ventilation openings; or, placed in a built-in installation, such as a bookcase or cabinet that may im-pede the flow of air through the ventilation openings. Ventilation - The appliance should be situated so that its

Heat – The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.

6

Power Sources - The appliance should be connected to a power supply only of the type described in the operating instructions or as marked on the appliance.

2

Grounding or Potarization – Precautions should be taken so that the grounding or polarization means of an appliance is not defeated. Ξ

Power-Cord Protection - Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance. 2

Cleaning – The appliance should be cleaned only as recommended by the manufacturer. 4.

Power Lines - An outdoor antenna should be located

15

to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the ground-Outdoor Antenna Grounding - If an outside antenna is is grounded so as to provide some protection against voltage surges and built-up static charges. Article 810 of the National Electrical Code, ANSI/NFPA 70, provides inconnected to the receiver, be sure the antenna system formation with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire away from power lines. 9

be unplugged from the outlet when left unused for a long period of time. Nonuse Periods - The power cord of the appliance should

Object and Liquid Entry – Care should be taken so that objects do not fall and liquids are not spilled into the enclosure through openings. <u>æ</u> 9

Damage Requiring Service - The appliance should be serviced by qualified service personnel when

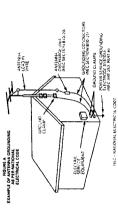

A. The power-supply cord or the plug has been damaged; or B., Objects have fallen, or liquid has been spilled into the appliance; or

The appliance has been exposed to rain; or

The appliance does not appear to operate normally or exhibits a marked change in performance; or

The appliance has been dropped, or the enclosure

Servicing – The user should not attempt to service the ap-plance beyond that described in the operating instruc-tions. All other servicing should be referred to qualified service personnel. 20

ന

- Always keep the POWER switch on the misin unit turned on fund the power on and off from the termine control unit. Unguing the power cord when you do not plan to use the unit for a long period of time.

DESIGNATIONS AND FUNCTIONS OF PANEL CONTROLS

POWER (Power Switch) 0

When the power switch is turned ON, power is supplied to the unit. It takes a few seconds after the power is turned on for the unit to warm up. This is due to the built-in muting circuit that When the power switch is turned ON (=), the MUTE/STANDeliminates noise during the on/off operation. BY LED (lights.

This jack is used to plug in the headphones. PHONES (Headphone Jack) 0

SPEAKERS (Speaker Selection Switch)

0

The PMA-925R/725R can be connected to two speaker systems: speaker system B. When A is pressed, the spoaker system connected to speaker When A is pressed, the spoaker system connected to speaker output terminals A operates. When B is pressed, the speaker system connected to speaker

output retirmlas B operates when the and a state of a s

LOUDNESS (Loudness Switch) 0

When the volume is low, it is difficult for the human ear to clearly distinguish notes in the flow and high frequency ranges. The bloudness switch allows a simple "one-louch" correction of this difficulty. Press the loudness switch ONI, a., when fistening to music at a low volume. The low notes and high notes will be corrected to produce a natural sound.

BALANCE (Balance Control)

0

This knob is used to adjust the balance between the left and right channels. When it is set to the entire position, the amplitude of the amplifier is equal on both sides. If there is a difference in the left and right channel output voilages for a carridge, move the knob to the left and the right to adjust it. If the volume on the right side is too low, turn the knob to the right (🤏). If the volume on the left side is too low, turn the knob to the left (\P). This will achieve an even balance on the left and right sides.

VOLUME (Volume Control) 0

furn the knob to the right () to raise the volume and to the left () to lower it. This knob controls the overall volume level.

BASS (Bass Control) 0

This knob is used to control the bass quality of the sound. When the knob is set at the center position, the frequency characteristics are flattened in the range below 1000 Hz. The bass is emphasized as the knob is moved off center to the right () , When volume control 🕝 is set to the right of the center position, and reduced as it is moved to the left (🕶).

TREBLE (Treble Control) 0

the effect of the other controls is reduced.

This knob is used to control the treble quality of the sound. When the knob is set at the center position, the frequency characteristics are flattened in the range above 1000 Hz. The treble and reduced as it is moved to the left (\P). When volume control G is set to the right of the center position, is emphasized as the knob is moved off center to the right (o), the effect of the other controls is reduced.

The controls (BALANCE, LOUDNESS, and TONE) can be used SOURCE DIRECT (Source Direct Switch) 0

when this switch is in the OFF (\blacksquare ,) position. When set to the OM (\blacksquare) position, the above controls are bypassed and the signets are input directly to the volume control circuit, providing high quality sound.

REC OUT SELECTOR (Rec Out Select Switch)

Θ

Use this switch to select the recording domonoent.

and sound quality

This amplifier has a full memory back-up system. When the power is turned on, INPUT SELECTOR **®** are set to the last mode set before the power was turned off.

REMOTE CONTROL OPERATION

The accessory Remote Control Unit is used to control the amplifier from a convenient distance.

(1) Inserting the Dry Cell Batteries 1. Remove the battery cover on the

Notes on Battery Usage

• RC-176 uses the size R6P (AA) dry cell batteries.

• Inc. 176 uses the size R6P (AA) dry cell batteries.

• The surface of the size of the Ampfillier from a near-by position, it is time to replace the batteries.

Insert two dry cell batteries as shown in the diagram on the bat-tery supply unit.

Do not mix new batteries with used ones.
Do not mix different types of batteries.
Do not jumper opposite poles of the batteries expose them to

the battery compartment.

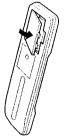

Batteries are prone to damage and leakage. Therefore:

heat, break them open, nor expose them to open fire.

If the batteries have leaked, remove any traces of battery fluid from the battery compartment wiping thoroughly with a dry cloth. Then insert new batteries.

Replace the battery cover.

Operate the Remote Control Unit while pointing it towards the Remote Control Sensor on the Amplifier as shown in the diagram on

(2) Directions for use

the left. The Remote Control Unit can be used at distances up to about 8 meters in a straight line from the amplifier. This distance will decrease reas in a straight line from the amplifier. This distance will decrease if there are obstructions brocking the infer-red light transmission or if the Remote Control Unit is not directed straight at the amplifier.

- Do not press the operating buttons on the Amplifier and the Remote Control Unit at the same time. This will cause misoperation.
 Operation of the Remote Control Unit will become less effective or entatic if the infrared Remote Control Unit will become less effective or entatic if the infrared Remote Control Unit and the sensor.
 Incase you operation 8 CRT. Vo other components by remote Control Unit and the sensor.
 Incase you operation 8 CRT. Vo other components by remote control, do not operate buttons on two different remote control units at the same time. This will cause misoperation.

Besides being able to operate the PMA-825R/725R amplifier with this Remote Control Unit, you can also operate a DENON cassette deck and CD player from this handy full-system Remote Control Unit.

• Only the NUTE/STANDBY LED ® lights when in the power stand-by mode.

• Only the NUTE/STANDBY LED ® lights when in the power stand-by mode.

• You may experience stratcoperation of the Remote Control Unit it it is operated in fluorescent light and direct sunlight, in particular it this light strikes the Remote Control Sensor on the Amplifier. However, this is not a malfunction, and if this should happen, simply protect the sensor against such light.

REMOVAL OF EACH SECTION

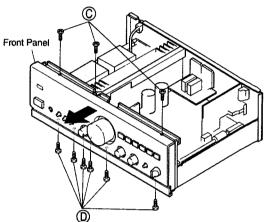

• Top Cover

- 1) Remove 4 screws (A) and 3 screws (B).
- 2) Pull up Top Cover in arrow direction.

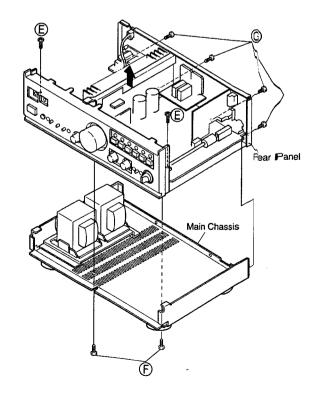

Front Panel

- 1) Remove 3 screws (C) .
- 2) Remove 6 screws (D) .
- 3) Detach Front Panel in arrow direction.

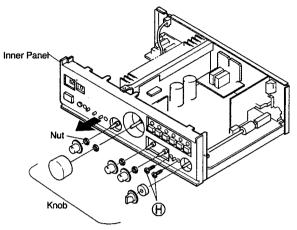

• Main Chassis

- 1) Remove 2 screws (E) .
- 2) Remove 2 screws F securing Power Radiator with Main Chassis.
- 3) Remove 4 screws (G) securing Rear Panel with Main Chassis.

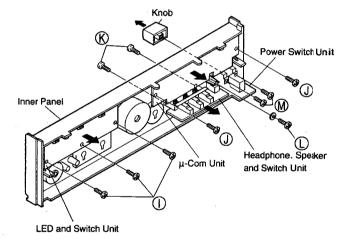

Inner Panel

- 1) Remove 5 Knobs and 4 nuts.
- 2) Remove 2 screws (H) and detach Inner Panel in arrow direction.

• Each Unit of Inner Panel

- 1) Remove 3 screws (), and detach LED and Switch Unit.
- 2) Remove 2 screws \bigcirc , and detach μ -Com Unit.
- 3) Remove 2 screws (K) securing Headphone, SP Switch Unit with Inner Panel.
- 4) Remove 1 screw (L) and 1 washer, and detach Headphone, SP. switch Unit.
- 5) Remove 2 screws (M) and a Knob, then detach Power Switch Unit.

FUNCTION OF NEW CIRCUIT

1. CHARACTERISTIC OF THIS CIRCUIT

The junction temperature of power amplifier output transistor always varies by an ambient temperature and music signal. Occurrence of junction temperature varying causes in change of bias current, unstable function, thus pure music signal playback is unable to do.

To maintain fixed bias current and to make pure music signal playback possible is the purpose of this circuit. This circuit holds stable bias current condition within a few seconds after turning on the power.

2. BLOCK DIAGRAM OF BIAS CONTROL CIRCUIT FUNCTION

As explained in Fig. 1, detects a voltage across the emitter resistors (RE) of TR1, TR2. Converts the detected voltage and comparing with the reference voltage to make the bias current value in stable state. Actually, these functions are performed by 1 chip IC.

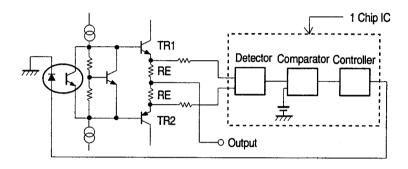

Fig. 1

TR1, TR2: Output transistor RE: Emitter resistor

3. POWER SUPPLY FOR ACTUATING CONTROL CIRCUIT

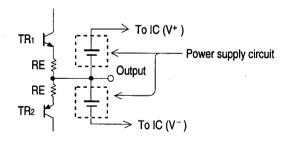

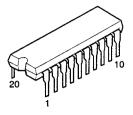

Fig. 2

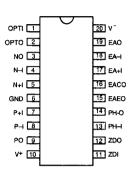

The circuit (IC) controlling bias current actuates by floating.

Accordingly, the power supply is also needed to be floated.

In this circuit, as indicated in Fig. 2, output is common to provide +, - power system and supplies to IC.

4. IC DESCRIPTION (μPC5023CS-064)

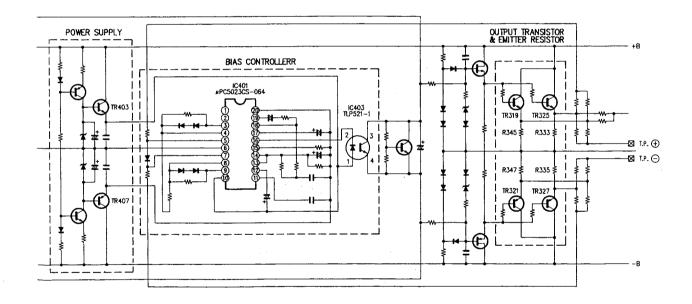

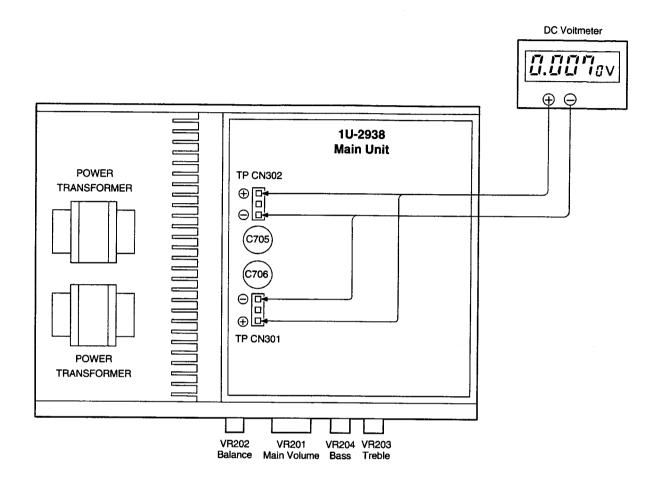

Pin. No.	Name	Contents		
1	OPTI	NCP		
2	ОРТО			
3	NO	Comparator output		
4	N-I	Comparator input (-)		
5	N+I	Comparator input (+)		
6 GND		Floating common		
7 P+I		Comparator input (+)		
8 P-I		Comparator input (-)		
9	PO	Comparator output		
10	V+	+ Power supply		

Pin. No.	Name	Contents
11	ZDI	Control signal stabilizer input
12	ZDO	Control signal stabilizer output
13	PH-I	Peak hold input
14	PHO	Peak hold output
15	EAEO	Controller gain setting
16	EACO	Control signal output
17	EA+I	Reference voltage
18	EA-1	Comparator gain setting
19	EAO	Comparator output
20	V-	- Power supply

5. CIRCUIT IN THE CONCRETE

METHOD OF ADJUSTMENTS

IDLING CURRENT

Setup

- 1. Lay the unit at an ordinary position away from a direct current from a cooler or fan. Do the adjustment at a temperature between 15°C (59°F) and 30°C (86°F).
- 2. Set controls as follows.

POWER SWITCH→ OFF (■)

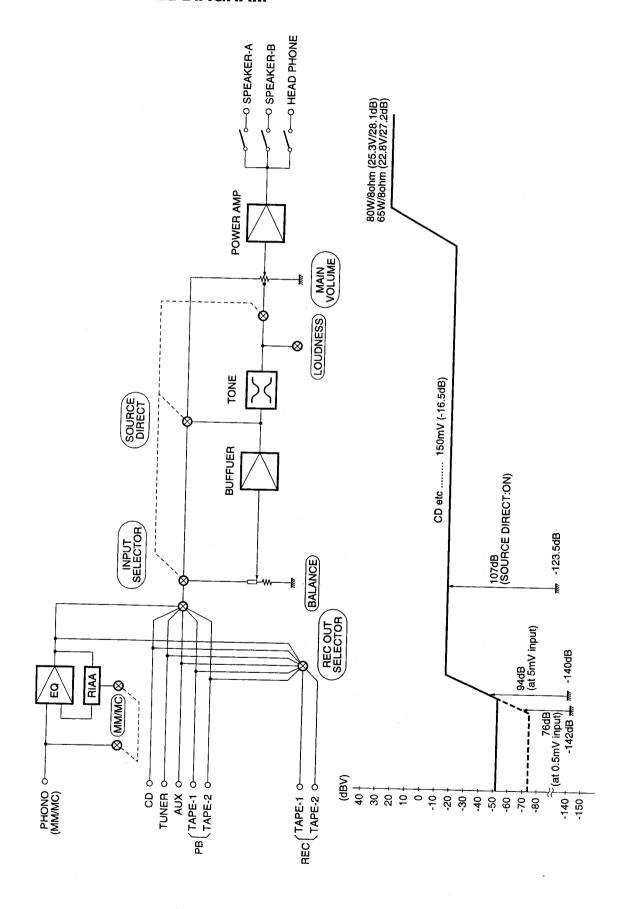

VOLUME CONTROL→ fully counterclockwise. (♠) min. (Main Volume VR201) (VR202, 203 and 204 are center position.)

SPEAKER Terminals -> open: do not connect the speakers, dummy load etc.

Confim

- 1. Remove Top cover. And then connect DC Voltmeter to Test points of Main Unit.
- 2. Connect Power cord to AC Outlet, and turn POWER Switch "on" (-).
- 3. 10 seconds after check to see DC Voltmeter reading is 7 ± 2 mV.
- 4. 2 minutes after re-check DC Voltmeter for 7 ± 2mV reading.

NOTE FOR PARTS LIST

- Part indicated with the mark " " are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.) **WARNING:**

Parts marked with this symbol \triangle have critical characteristics.

Use ONLY replacement parts recommended by the manufacturer.

Resistors

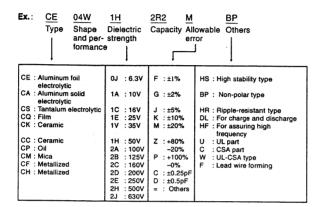

* Resistance

1 8 2 ⇒ 1800 ohm = 1.8 kohm
Indicates number of zeros after effective number.
2-digit effective number.

• Units: ohm

1 R 2 ⇒ 1.2 ohm 1-digit effective number. 2-digit effective number, decimal point indicated by R.

Capacitors

* Capacity (electrolyte only)

2 2 ⇒ 2200µF
Indicates number of zeros after effective number.
2-digit effective number.

* Capacity (except electrolyte)

2 2 2 ⇒ 2200pF = 0.0022µF

CMore than 2)— Indicates number of zeros after effective number.

• Units: µF.

2 2 1 ⇒ 220pF Indicates number of zeros after effective number.

• Units: pF.

 When the dielectric strength is indicated in AC, "AC" is included after the dieelectric strength value.

NOTES ALL RESISTANCE VALUES IN OHM. k=1.000 OHM, M=1.000.000 OHM

ALL CAPACITANCE VALUES IN MICRO FARAD. P=MICRO-MICRO FARAD

EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.

CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

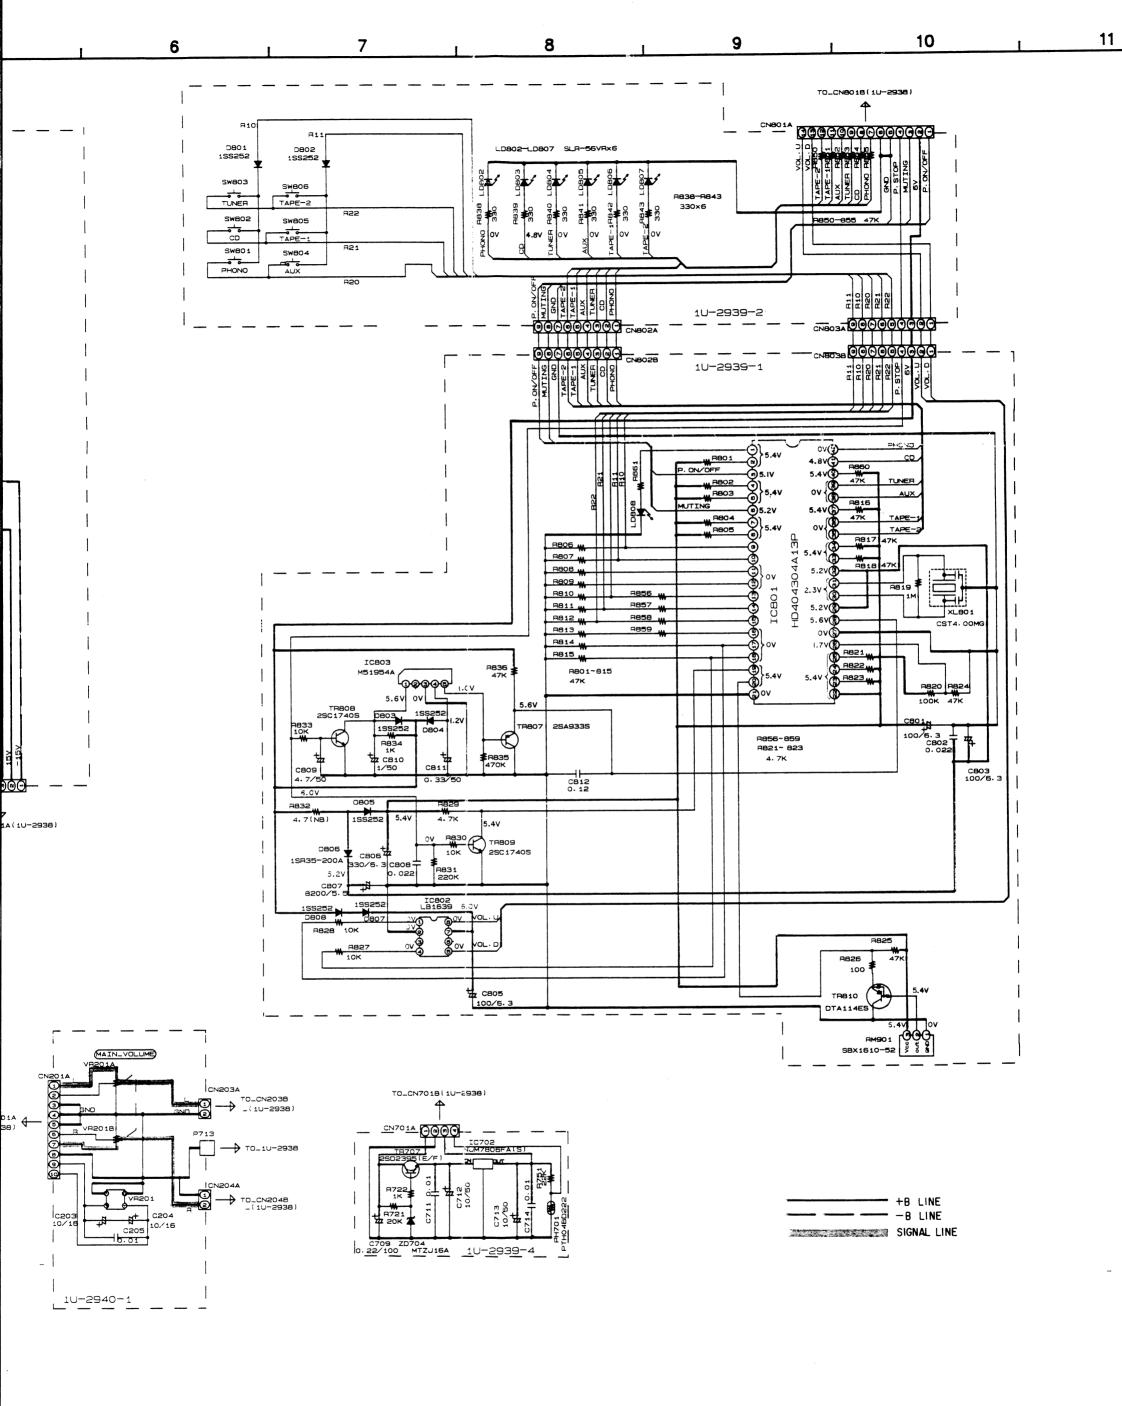

manufacturer. CAUTION:

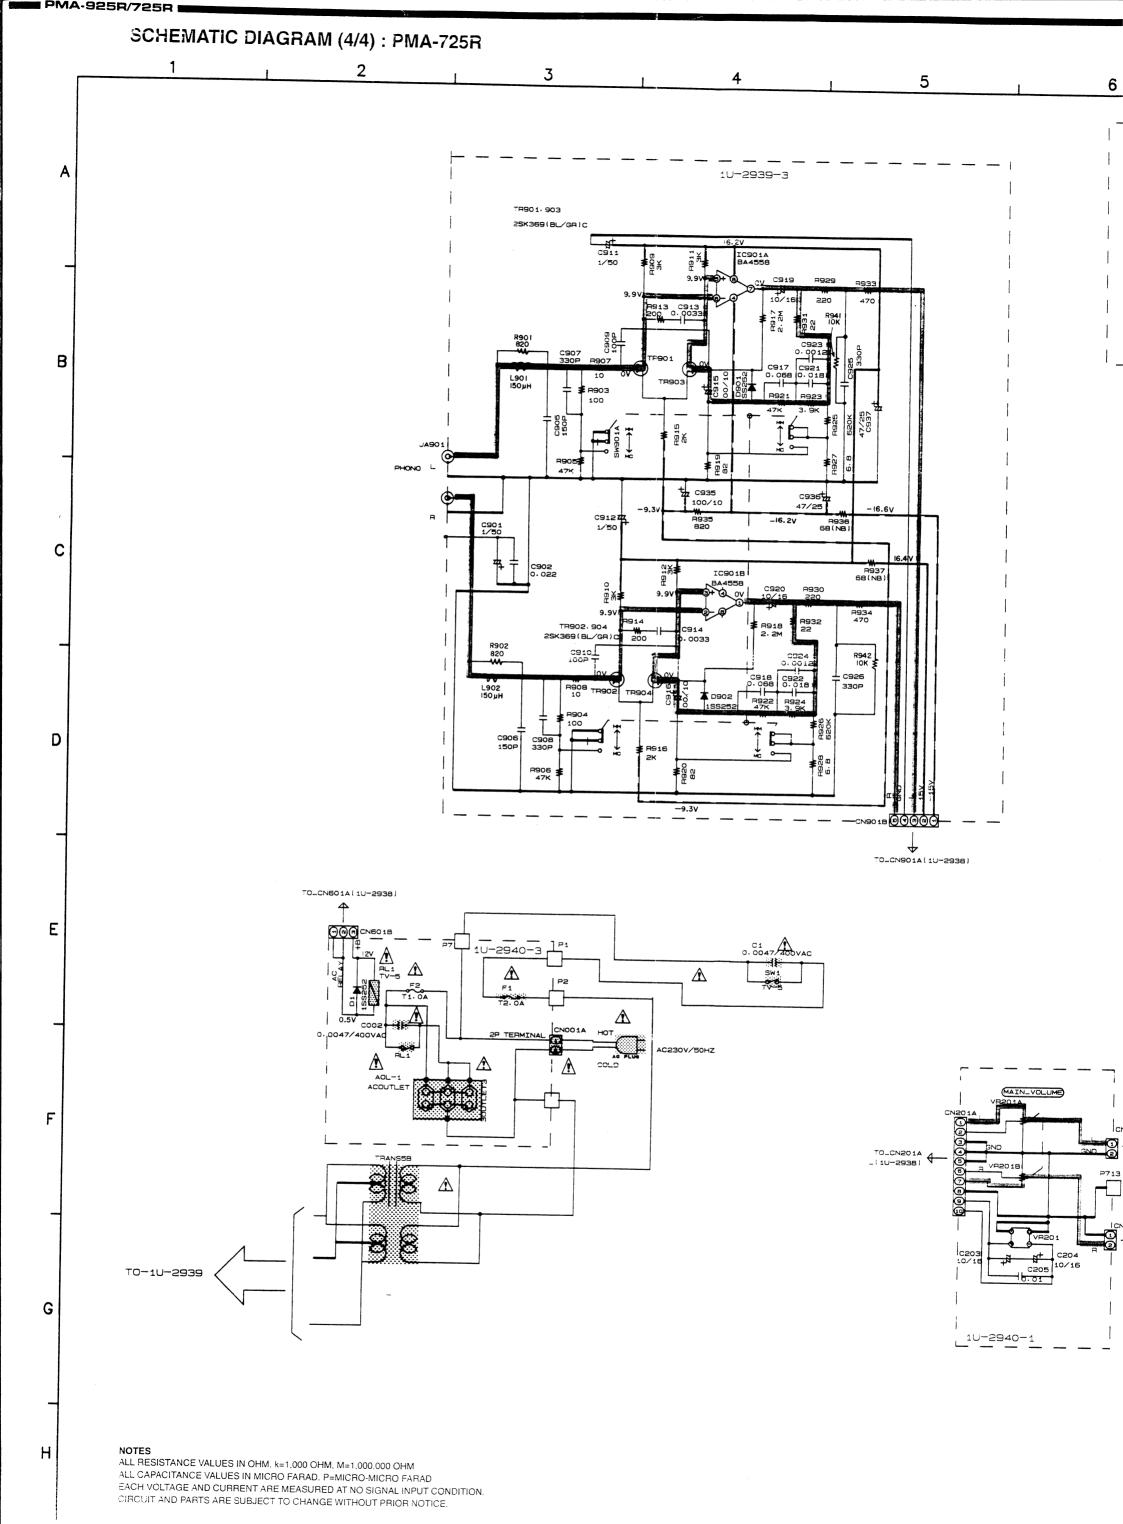

WARNING:DO NOT return the unit to the customer until the problem is located and corrected.

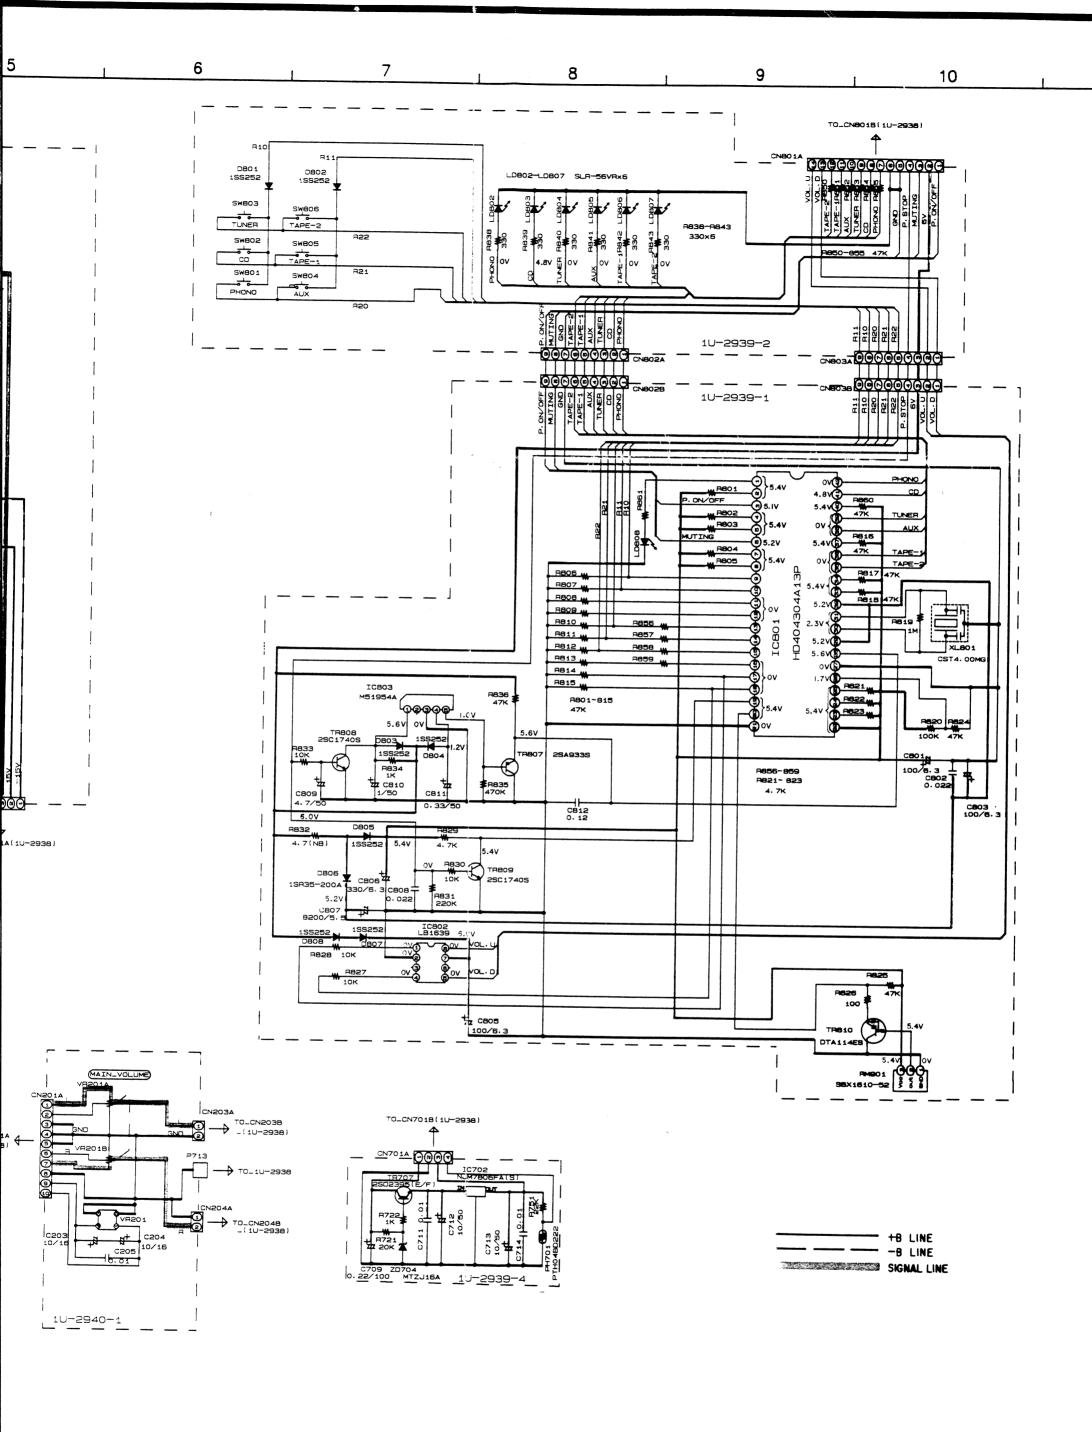

WARNING:
Parts marked with this symbol 🛕 📖 have critical characteristics.
Use ONLY replacement parts recommended by the

CAUTION:
Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

WARNING:DO NOT return the unit to the customer until the problem is located and corrected.
